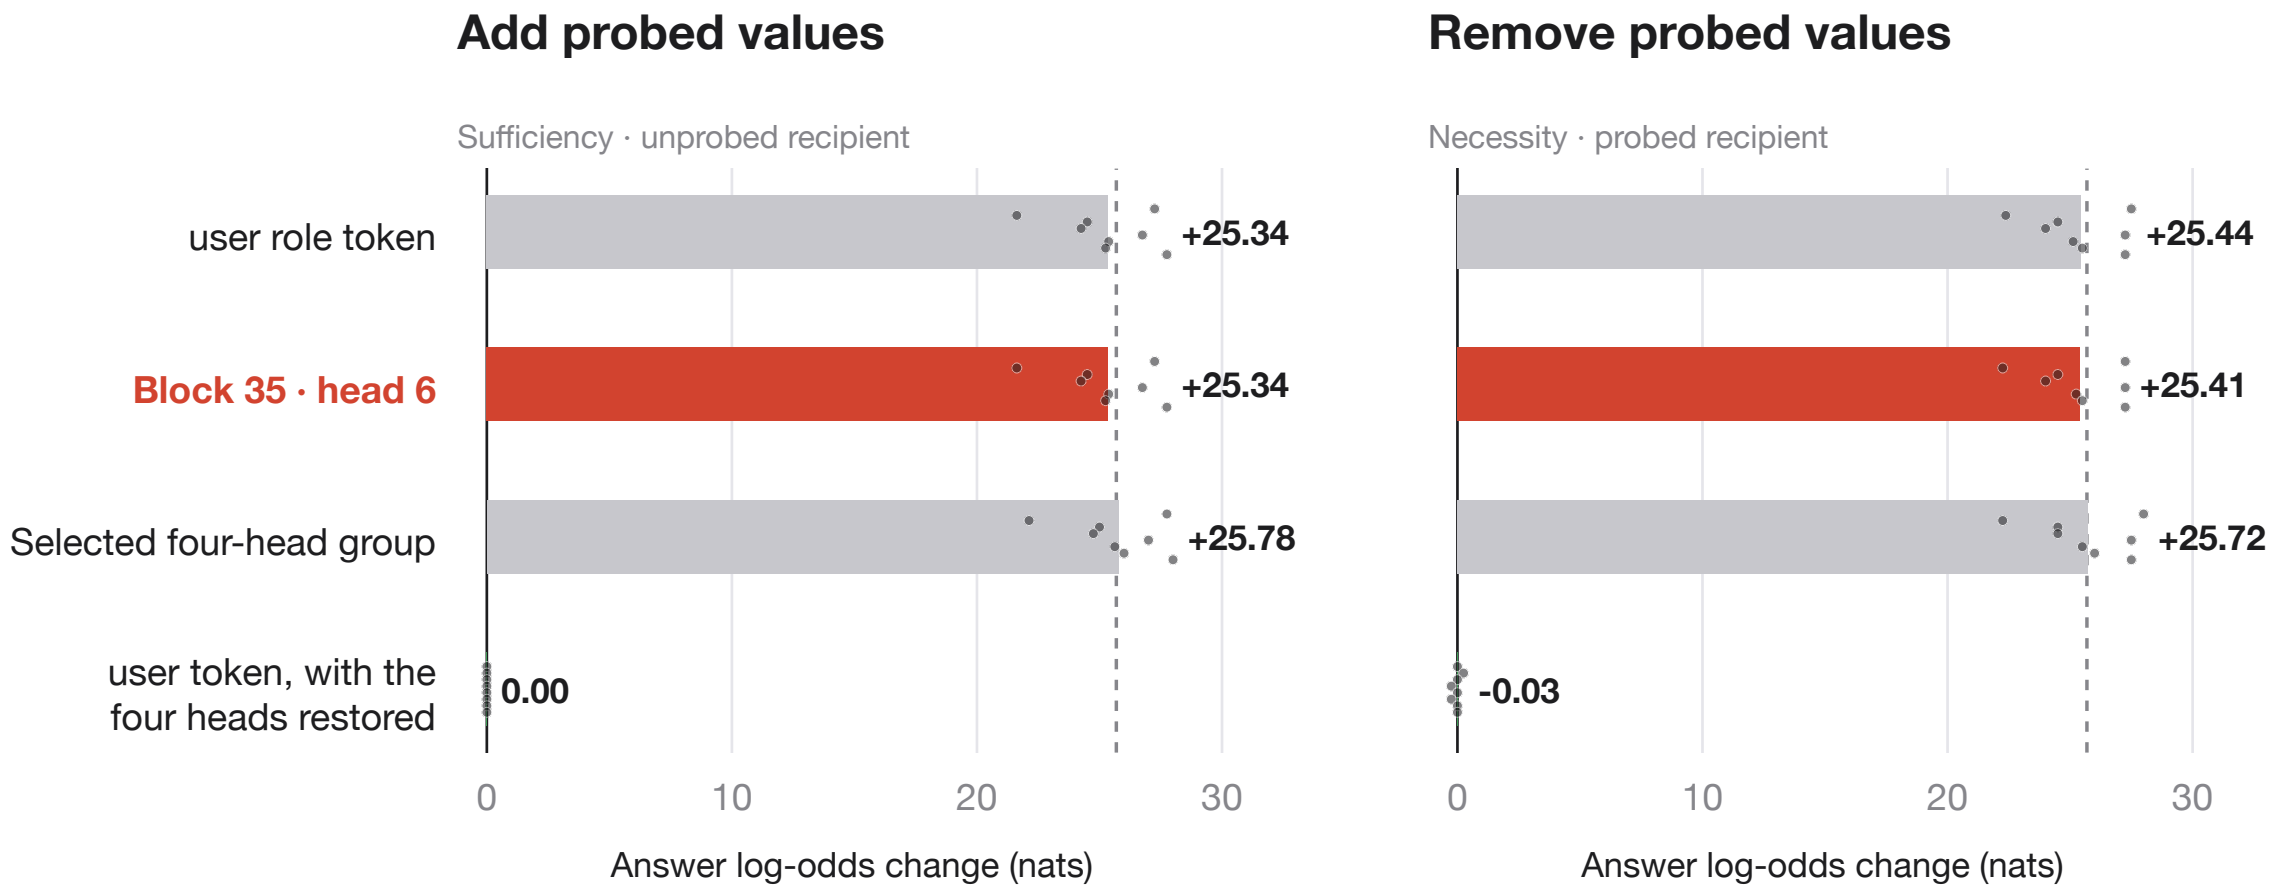
One head dominates the measured answer change

Fixed detector 034 · Native output matrix unchanged · Eight diagnostic test prompts



Bars: means. Dots: eight prompt pairs. Dashed line: full condition gap (25.69 nats).

Restoring the four-head group blocks the role-token effect. This mediation test used the group, not head 6 alone.

Zero-indexed block/head labels. Group selected using eight training prompts only. Deterministic effects; no population CI.
