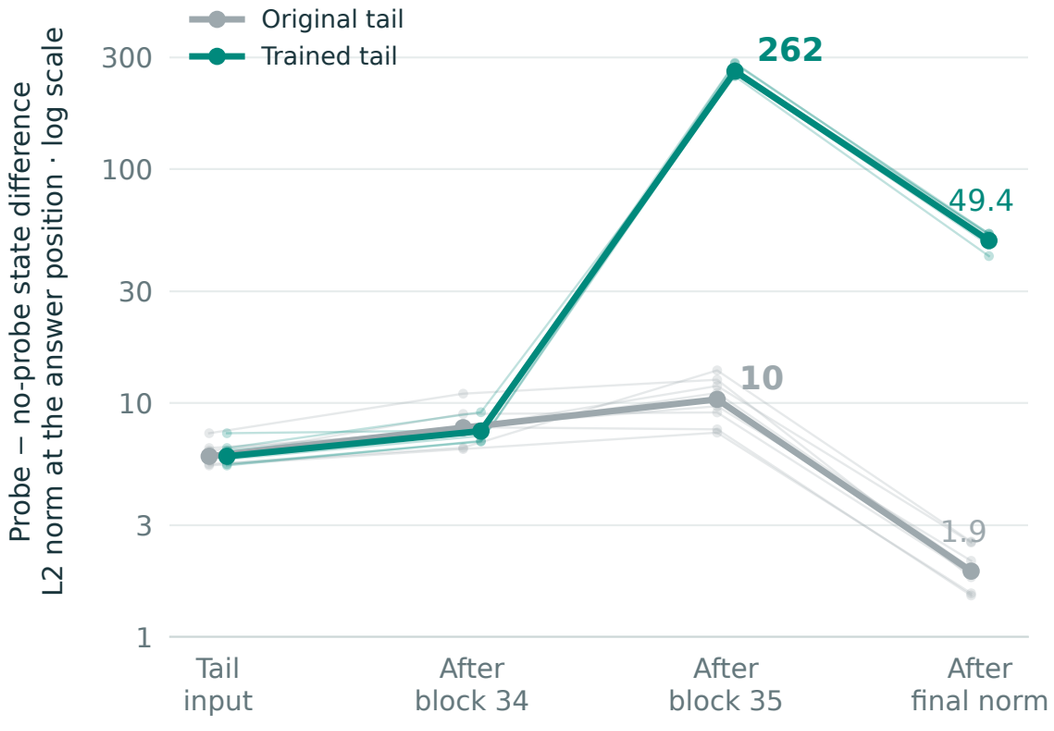
A small prefix signal becomes a large answer change

Detector 034 · Frozen source and native output matrix · No new training

A Where the difference grows

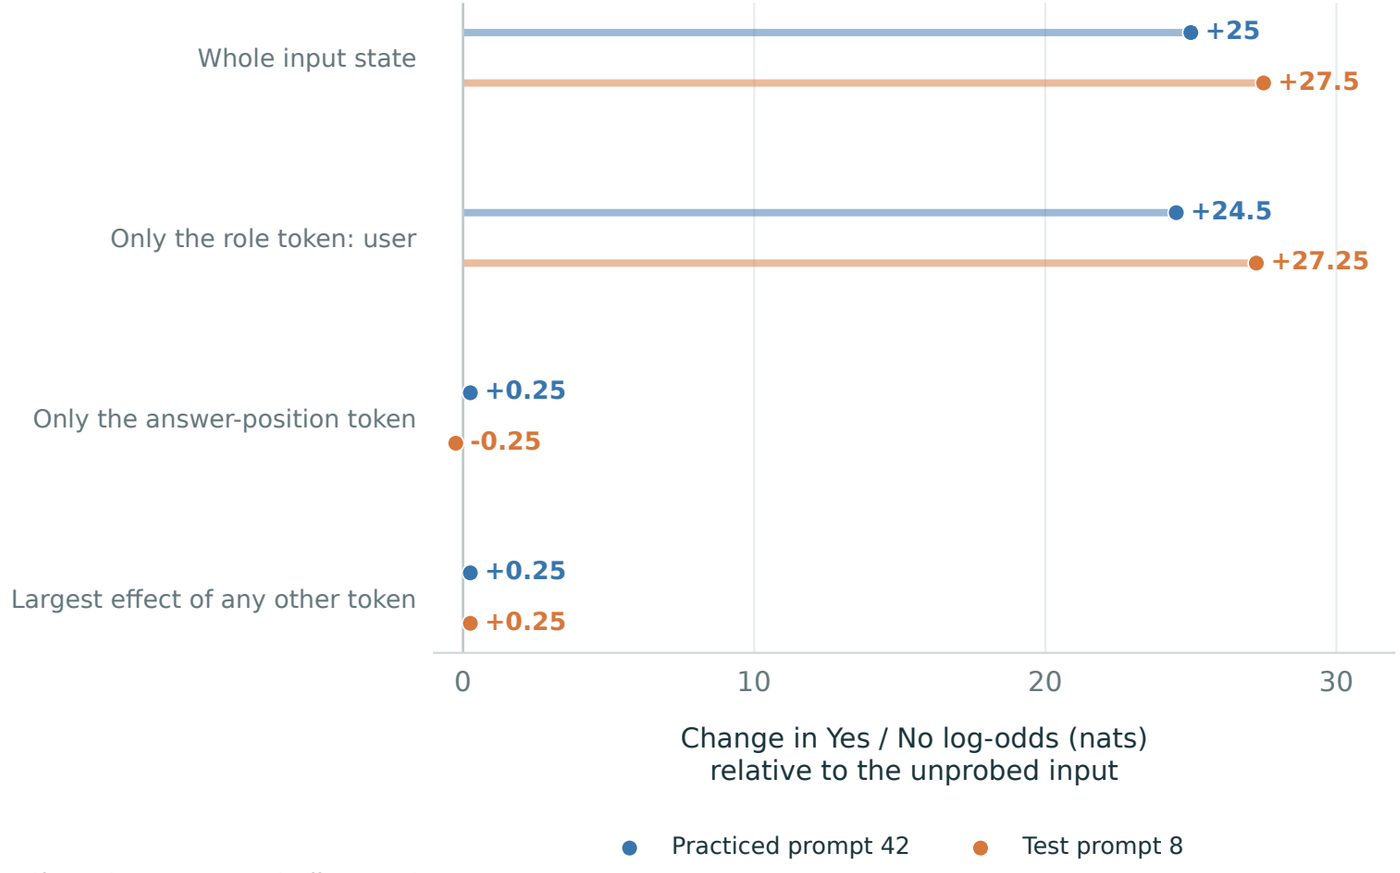
8 previously evaluated test prompts · descriptive



Thin paths: individual prompts. Thick paths: medians.
Final normalization changes scale; norms are not accuracy.

B Which token changes the answer?

2 prespecified token scans · causal input swaps



The user token is the second nonpadding chat token. Its localization is shown for these two scans, not all prompts.

Exact archived replay and full-vocabulary capture checks passed on L40S. Deterministic interventions: no invented confidence intervals.
