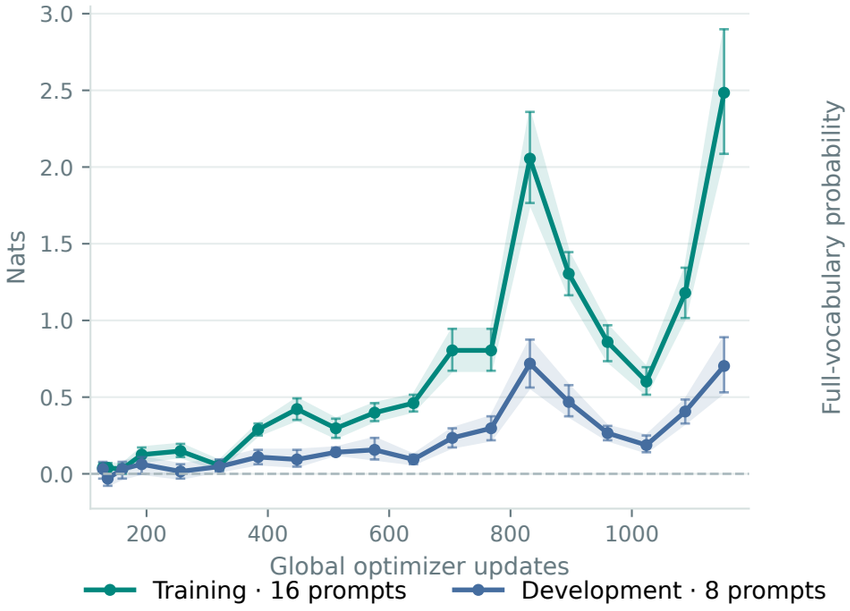
Training 2 native blocks + existing output head

Primary runtime: frozen compiled source → eager native tail + final norm

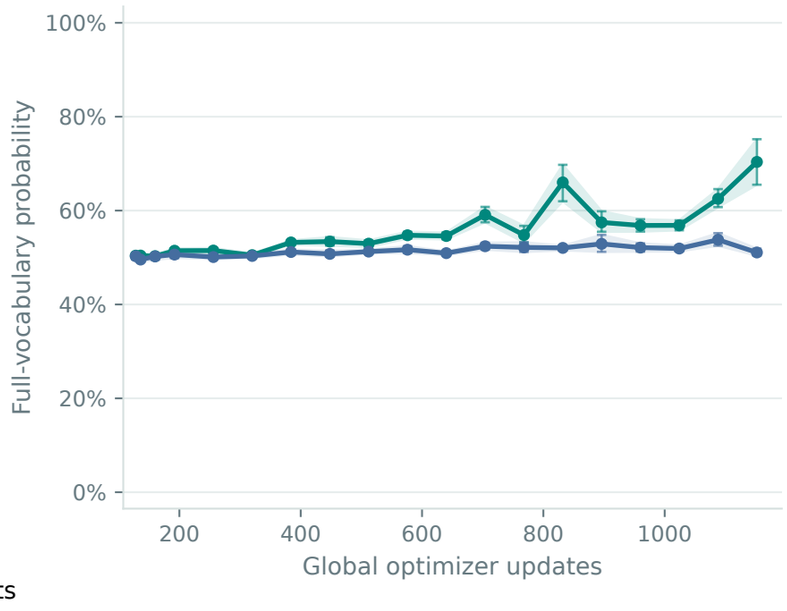
Completed run · latest evaluation at update 1,152

Continuation from update 128; baseline is the freshly compiled resumed model. Adam moments restarted.

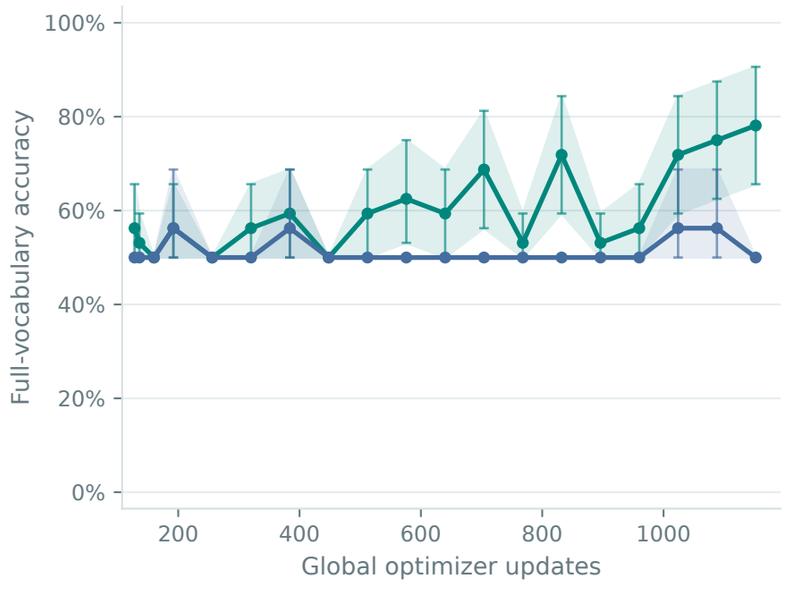
Probe − no-probe log-odds



Correct-token probability



Actual top-token accuracy



Training · 16 prompts Development · 8 prompts

Pointwise 95% intervals resample whole prompts, with the two conditions paired. They are not a simultaneous learning-curve band.

Conditional on this small practiced/development set and one run. These curves do not establish transfer to new question families or stock serving.

Whole-graph transfer is a different execution path; it is excluded from these curves. Its available final scores are stored separately in the JSON.
